(54) Title: ANTI GRAVITY SYSTEM

(57) Abstract: An anti gravity system with a hallow metal sphere placed inside a very strong hallow outer metal sphere with a clearance in between the two and the outer sphere having a sump at bottom, the clearance between the spheres filled with mercury or lead, the sump having an electric resistance coil connected to a generating unit via a transformer generates high temperature in the matter in between the spheres and a force is applied on the inner face of the outer sphere by the inner hallow sphere and the system looses its weight depending on the temperature.

WO 01/09509 A2

TITLE OF INVENTION: ANTI GRAVITY SYSTEM

BACK GROUND OF THE INVENTION

Anti gravity is required for man for several applications such as for aircrafts,spaceships,helicopters ,for sending setellites into orbit etc.

Presently the anti gravity force is produced by using three techniques
1]By using aerofoil technology used in helicopters 2] By using Newton's third law of motion which is extensively used for propulsion of jet planes,rockets,missiles,spaceships 3] By using hot air balloon for lifting of objects of less weight.But all these systems consume enormous quantity of fossil fuels.

BRIEF SUMMARY OF THE INVENTION

It is the primary object of the present invention to provide a solution for the high consumption of fuel for generating anti gravity force by formulating the most astonishing anti gravity system utilising the natural laws and the laws constituting the universe.It is another object of the invention to formulate an anti gravity system without using the Newton's third law of motion and by using the present discovery.We see hot gasses going up against gravity in still weather conditions.Hence there is a relation between heat and anti gravity. By using this phenomenon man has deviced the hot air balloon for lifting of objects.But the size of a hot air balloon is very large and it can not lift heavy weights economically to greater heights. Buoyant force is a powerful force in nature which acts opposite to gravitational force. If we combine these two laws we arrive at

a system as shown in FIG[1] in which there exist an outer hallow sphere and an inner hallow sphere is placed inside the outer sphere and water is filled in between the two. The inner hallow sphere applies a buoyant force over the inner face of the outer sphere equal to the weight of water displaced by the inner sphere. But if we weigh this system weight is not changed. This is due to the additional hydraulic forces acting in the system. Now let us imagine what happens when heat is supplied to the water in between the two spheres. The temperature of water is gradually increased and when it exceeds the boiling point of water pressure increases in the system and the pressure tries to push the inner hallow sphere to the centre of the outer hallow sphere. At this moment the hydraulic forces of the system cease to exist. When the temperature increases the inner sphere applies a force over the inner face of the outer sphere and the system now loses its weight depending on the pressure and temperature of the matter in between the hallow spheres and the system is called the "anti gravity system".

This phenomenon exists in the universe as well. Let us now analyse the solar system by using the anti gravity law. The sun is at the centre of the solar system and all planets are revolving around the sun in fixed orbits with different speeds. Each planet is attracted towards the sun and the force depends upon the masses of sun, planet and the distance between the two. The scientists to date believe that this force of attraction is counter balanced by the centrifugal force produced due to the rotation of the planet around the sun. But this theory is not correct. The planet is also pulled away from the sun with a force and the attraction force is counter

balanced by the centrifugal force and the new force which pulls the planet away from the sun. If we calculate the force of attraction between the sun and earth and the centrifugal force acting on earth these two forces are not same. We see a large difference between these two forces. This is due to the fact that the repulsive force acting on earth is ignored. The earth will itself acts as an anti gravity system with respect to sun and is pulled away from the sun. Let us now see how the earth acts as an anti gravity system.

The earth has mantle and below this it has the liquid core and the center of the earth has a solid core. The actual construction of the solid core is still not known clearly. Due to the gravitational force acting towards the center of the earth enormous pressure is developed in liquid core and due to this high temperature is produced in the liquid core due to various nuclear reactions. Due to the high temperature high pressure is developed in liquid core. Now it is to be noted that the central solid core is applying an internal thrust over the inner face of the mantle which tries to push the earth away from the sun. This is due to the fact that the total weight of the solid core is less than the weight of the liquid that is displaced by the solid core. The high pressure in liquid core tries to push the solid core towards the center of the earth. Due to the inner thrust of the solid core over the inner face of the mantle the speed of nuclear reaction increases in a limited area and this creates thermodynamic effect and the magma tries to escape to a low pressure area due to which the liquid core continuously rotates around the solid core which confirms the recent American discovery that the liquid core is not stationary. The rotation of

the liquid core with high speed applies an inner tangential force due to which the earth rotates around itself and also around the sun. The earth is placed in space where the force of attraction is balanced by the repulsive force and centrifugal force ignoring the effect of other planets. This is the cause to why there is no relation between the masses of planets and the orbits in which they rotate. Hence from the above theory we can conclude that the anti gravity theory proposed is correct and fool proof. Similarly all planets in space attract each other as per Newton's universal theory of attraction and also repulse each other as per the present "universal theory of repulsion". The planet will take it's position in space where all all the forces acting on it are balanced together. The present theory is named as the "universal theory of repulsion". The theory can also explain some mysteries of nature which are not discussed here.

The present invention "Anti gravity system" comprising a hallow metal sphere placed inside a very strong hallow outer metal sphere with a clearance in between the two and the outer sphere having a sump at bottom, the clearance between the spheres filled with mercury or lead, the sump having a heating electric coil connected to the generating unit via a transformer generates a high temperature due to which the matter in between the spheres is heated and a force is applied on the inner face of the outer sphere by the inner hallow sphere and the system looses it's weight depending on the temperature. Further objects, features and other aspects of the invention will be understood from the following detailed description of the preferred embodiments of the invention referring to the attached drawings.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING

FIG [1] shows the cross sectional elevation of the anti gravity system before giving heat to the matter in between the two hallow spheres.

FIG [2] shows the cross sectional elevation of the anti gravity system after giving heat to the matter in between the two hallow spheres.

FIG [3] shows the cross sectional elevation of the anti gravity system after giving heat to the matter in between the two hallow spheres and also showing the arrangement of sump, electric coil, generator and electrical network.

DETAILED DESCRIPTION OF THE INVENTION

Referring to FIG [3] a steel hallow sphere [1] is shown with a sump [2] at bottom with electric coil [3] fixed in the sump. The electric coil is connected to an electric generator unit using fossil fuel or fuel cell using hydrogen [4] via a transformer [5] and a switch [6] is also provided in the circuit. The electric coil is passed through an insulator material and the coil will not touch the outer sphere material. Another hallow sphere [7] is placed inside the outer sphere [1] and the clearance between the two spheres is filled with liquid metal mercury or solid low temperature melting material like lead [8] so as to get maximum lifting force. The outer face of the inner sphere [7] and the inner face of the outer sphere are coated with material which is highly resistant to temperature and non conductor of heat.

WORKING OF SYSTEM

When heat is not supplied to the liquid in between the spheres the inner sphere will be applying a force over the inner face of the outer sphere but

the weight of the system does not change due to the static hydraulic forces acting on the system. When generator unit is started the electric coil is heated and the matter in between the spheres is heated to a high temperature. When the temperature increases the dynamic pressure increases in the liquid and this pressure tries to push the inner hallow sphere to the center of the outer hallow sphere and the static hydraulic forces which exist before the application of heat cease to exist and the system loses its weight depending on the temperature of the fluid and the dynamic pressure developed in the system due to the application of heat. The dynamic pressure developed is a function of the temperature produced. Hence the lifting force achieved is a function of the material used in between the spheres.

ADVANTAGES OF THE SYSTEM

- 1] Interplanetary transport will start when the discovery is put to use.
- 2] The globe will become a small village.
- 3] Satellites can be put into orbit with little cost and malfunctioning satellites can be brought back to earth.
- 4] Information technology will revolutionise the human life with thousands of satellites.
- 5] Man can reach any part of globe in minutes in air or in orbit path.
- 6] Lack of megawatts of energy can be produced from space without any fuel.
- 7] Anti gravity machines will work day and night in agriculture, construction and industry.

8] Pollution will become zero since the machines will use water hydrogen cycle.

9] No roads, highways, flyovers, under bridges, railway lines, ships, cars, buses, trains, helicopters, planes, berths for ships, ground cable lines, HT power lines, micro wave towers, long bridges over rivers, satellite launching stations, air fields are required. Hence all this amount can be utilised for food, shelter, clothing, medical aid, education, sanitation, recreation, automation, electronics, new machine development etc.

CLAIMS

I claim

1] An "Anti Gravity System" comprising a hallow sphere [1] with sump [2] at bottom with electric coil [3] fixed in the sump said coil connected to a electric generator unit using fossil fuel or fuel cell using hydrogen [4] via a transformer [5] and a switch [6] is also provided in the circuit said electric coil [3] is passed through an insulator material and the said coil [3] will not touch the outer sphere material, another hallow sphere [7] is placed inside the said outer sphere [1] and the clearance between the two spheres [1] and [7] is filled with a liquid metal mercury or solid low temperature melting material like lead [8] so as to get maximum lifting force, the outer face of the inner sphere [7] and the inner face of the outer sphere [1] are coated with material which is highly resistant to temperature and non conductor of heat.

2] The "Anti gravity system" as claimed in claim [1] loses its weight when heat is generated in the said electric coil due to which the matter in between the said spheres is heated to a high temperature and a force is applied on the inner face of the said outer sphere by the said inner hallow sphere and the said system loses its weight depending on the temperature.

3] The said "Anti gravity system" as claimed in claim [1] loses its weight when the temperature increases and the dynamic pressure increases in the said liquid metal and said pressure tries to push the said inner hallow sphere to the center of the said outer hallow sphere and the static hydraulic forces which exist before the application of heat cease to exist.

4] The present invention is by no means limited to the particular construction herein disclosed and/or shown in drawings but also comprises any modification or equivalents within the scope of the disclosure.

5] An "Anti gravity system" as claimed in claim [1] substantially as herein described and with reference to and as illustrated in the accompanying drawings.
